

# Product Care

## TOPLINE INSTALLS

**Getting the very best out of your product.**

**This is a guide only, recommended that cleaning is to be done every 3-4 months. If within a coastal area 2-3 months is best.**

**Glass** - Simply get 2 clean micro fibre cloths and a bottle of glass cleaner of your choice. Keep one cloth wet & one dry.

**Aluminium** - A bucket with warm water, diluted with detergent/soap. Start with a very soft brush/sponge and gently scrub the aluminium repeat if necessary, rinse it off with clean fresh water & a micro fibre cloth if you feel the need to dry it.

**Shower hardware & silicone** - A bucket of warm soapy water, simply scrub with a soft cloth and wash off with clean water. Hardware can be restored with a soft wax once dry.

**Window & door tracks** - A simple vacuum & wipe off of any dirt and grime, do not use lubricants or grease as this cause dirt to stick and can make it worse in the long run. (Small amount of silicone spray to wheel bearings & track is acceptable)

**All products - It is NOT recommended to use any harsh chemicals or abrasive cloths/brushes as it can potentially scratch and remove the final finish to all surfaces. E.g bleach, white king.**

**Security screens** - warm soapy water with and clean with a microfibres cloth. Again micro fibre cloth to dry.

Enjoy your product (s).
